## **Product Type & Application**

The Bradford Ventilation WindMaster is a wind driven natural ventilator designed to exhaust heat & moisture from the roof space, without the use of electrical energy.

#### Compliance with the NCC

For use in Australia, when correctly specified and installed, this product provides the following compliance:

#### NCC2022

- Ventilation of Roof Spaces Meets the requirements of NCC2022 Volume 1 Amend. 2 F8D5 and ABCB Housing Provisions Standard 2022 Amend. 2 10.8.3 as a Deemed to Satisfy solution for condensation management for NCC Climate Zones 6, 7 and 8.
- Weatherproofing Meets the requirements of the NCC 2022 Volume 2 Amend. 2 Weatherproofing Performance Requirement H2P2 via Deemed-to-Satisfy (DtS) and performance solution pathways.

#### NCC2019

- Ventilation of Roof Spaces Meets the requirements of the NCC2019 Volume 1 Amend 1 F6.4 and NCC 2019 Volume 2 Amend.1 3.8.7.4 as a Deemed-To-Satisfy
- Weatherproofing Meets the requirements of the NCC 2019 Volume 2 Amend. 1 Weatherproofing Performance Requirement P2.2.2 via Deemed-to-Satisfy (DtS) and performance solution pathways.

# **Evidence of Suitability**

- Ventilation of roof spaces Bradford Ventilation DTS Solution Calculation.
- Weatherproofing Excelo Consulting Engineers Performance Solution Report ECE24168 Class 1 & 10.

#### Conditions of Storage, Use & Maintenance

- Store in the original packaging in a cool and dry area.
- Do not attempt to repair contact Bradford Ventilation for service advice.

Refer to the product warranty at bradfordventilation.com.au for more information.

#### **Limitations of Use**

- IMPORTANT Do Not Modify This Product: Compliance with the evidence of suitability data referenced in this document is only achieved by the product or configuration listed in this PTS.
- This product has not been tested for, and is not suitable for use in cyclonic wind regions C or D.
- . Do not use for exhausting hazardous, abrasive, acidic and alkaline vapour or areas containing explosive or corrosive
- This product is not suitable for bushfire BAL-12.5 to BAL-40 or FZ rated areas.
- This product is not suitable for use within 500m of a saltwater body.

#### **Specific Design or Installation Instructions**

- Isolate power before installation.
- This product requires specific areas to be sealed against water entry and other areas to be left unsealed to allow internal condensation drainage - refer to the installation quide for details.
- New construction refer to the tables below for recommended ventilation levels. Note that there are differences in requirements between NCC 2019 and NCC
- Retro-fit construction for each 90sqm of ceiling area it is recommended that 1 WindMaster and 2 Bradford metal eave vents should be installed.
- The rotating head of this product must be installed horizontally to ensure correct operation.

For general installation guidance refer to the product installation guide at www.bradfordventilation.com.au

#### Specific Design or Installation Instructions cont.

#### NCC2022 Amend. 2 Ventilation of Roof Spaces Deemed-To-Satisfy Solution Requirements Calculation in Table 1:

The table below indicates the ventilation opening requirements for condensation management in NCC Climate Zones 6, 7 and 8. The NCC gives and open area requirement per meter length of the longest horizontal dimension (e.g., the longest length of gutter) of the roof, the table indicates how many products are required based on this. Ventilation openings should be evenly distributed.

WindMaster vents should be installed not more than 900mm below the ridge or highest point of the roof space, measured vertically.

Table 1. NCC 2022 Amend. 2 Bradford Deemed-To-Satisfy Solution

| Products      | WindMaster Roof Ventilator<br>Requirement | Bradford Metal Eave Vent Requirement     | Bradford Poly Eave Vent Requirement               |
|---------------|-------------------------------------------|------------------------------------------|---------------------------------------------------|
| Roof Pitch    |                                           |                                          |                                                   |
| <10°          |                                           | Install 1 Metal Eave Vent for every 0.7m | Install 1 Poly Eave Vent for every <b>0.4m</b> of |
|               |                                           | of the longest horizontal roof length.   | the longest horizontal roof length. These         |
|               |                                           | These must be equally divided between    | must be equally divided between the two           |
|               |                                           | the two opposing ends of the roof.       | opposing ends of the roof.                        |
| ≥10° and <15° | 1 WindMaster for every 12.5m of           | 1 Metal Eave Vent for every 1.4m of the  | 1 Poly Eave Vent for every <b>0.9m</b> of the     |
|               | the longest horizontal roof length.       | longest horizontal roof length.          | longest horizontal roof length.                   |
| ≥15° and <75° | 1 WindMaster for every 12.5m of           | 1 Metal Eave Vent for every 5.0m of the  | 1 Poly Eave Vent for every 3.3m of the            |
|               | the longest horizontal roof length.       | longest horizontal roof length.          | longest horizontal roof length.                   |
| ≥15° and <75° | 1 WindMaster for every 12.5m of           | 1 Metal Eave Vent for every 1.4m of the  | 1 Poly Eave Vent for every <b>0.9m</b> of the     |
| Cathedral     | the longest horizontal roof length.       | longest horizontal roof length.          | longest horizontal roof length.                   |

**IMPORTANT APPLICATION NOTE:** The number of vents required should be rounded up, not down, to ensure that the ventilation provided meets or exceeds the recommended requirement. For example, the ventilation requirement for a 10° pitched roof 20m long in the longest horizontal direction is calculated as follows:

- The ventilator requirement (1 per 12.5m) is calculated as follows: 20m divided by the recommended WindMaster spacing of 12.5m = 20/12.5 = 1.6 vents which should be rounded up to 2 WindMasters, to be evenly distributed along the roof.
- The metal eave vent requirement (1 per 1.4m) is calculated as follows: 20m divided by the recommended metal eave vent spacing of 1.4m = 20/1.4 = 14.2 eave vents which should be rounded up to 16 metal eave vents, evenly distributed around the roof.

#### NCC2019 Amend. 1 Ventilation of Roof Spaces Deemed-To-Satisfy Solution Requirements Calculation in Table 2:

The table below indicates the ventilation opening requirements for condensation management in all NCC Climate Zones when kitchen, bathroom, sanitary compartment or laundry exhaust systems are discharging into the roof space.

- o Calculate the area (m²) of ceiling directly under the roof space;
- Determine the pitch of the roof;
- Look-up the recommended number of WindMasters and Bradford metal eave vents in the Deemed-To-Satisfy Solution Table 2 below;
- Distribute the WindMaster(s) and Bradford Metal Eave Vents evenly.

# Specific Design or Installation Instructions cont.

Table 2. NCC 2019 Amend. 1 Bradford Deemed-To-Satisfy Solution

| Roof Pitch | Total Ceiling Area <sup>1</sup> | Number of            | Bradford Metal Eave | Bradford Poly Eave |
|------------|---------------------------------|----------------------|---------------------|--------------------|
|            | (m²)                            | WindMasters required | Vents required      | Vents required     |
| > 22°      | < 62                            | 1                    | 5                   | 7                  |
|            | < 124                           | 2                    | 9                   | 13                 |
|            | < 187                           | 3                    | 13                  | 15                 |
