Gyprock are proud to be the preferred supplier of plasterboard, cornice and compounds for one of Australia's most loved TV shows, The Block.

CSR

20 SEASONS OF GYPROCK

For 20 seasons of The Block, CSR Gyprock has been 'holding it all together' and adding that extra touch of sophistication and finish to the homes.

For every season of The Block, Gyprock has supplied the plasterboard throughout the homes, softening hard edges, providing quality ceilings and cornices and adding curves on staircases, in bathroom niches, joinery, doorways and more.

The 2024 season was no different! The open-plan living and dining areas were designed on a grand scale and as such, over 684sqm of Gyprock was required to cover the spaces alone!

House 2 featured beautiful curved edges and archways throughout the home (*pic ① and ③*) and a beautiful cathedral-style feature wall and a light-filled ceiling was created in the stairwell of house 5, using Gyprock Flexible Plasterboard (*pic ②*).

The expansive light-filled and high ceilings in each of the homes was achieved using Gyprock Supaceil.

GYPROCK FLEXIBLE PLASTERBOARD

Gyprock Flexible is ideal for curved shapes. It is a 6.5mm thick plasterboard sheet with an enhanced gypsum core, designed to bend for small radius curves.

From concept to creation, designers and installers can create convex curves with a 250mm radius and concave curves with a 450mm radius.

GYPROCK GOLD™ TOPPING COMPOUND

Gyprock Gold™ is our newest premium lightweight topping compound, typically used as a top coat in a three-coat jointing system in residential and commercial walls and ceilings.

Formulated to a creamy consistency, it's super easy to mix and apply by both machine and hand and is super easy to sand achieving a premium quality finish.

PERFECT SOLUTION FOR WET AREAS

All five teams of The Block designed unique and memorable bathrooms covering different styles of design and architecture. But every bathroom had one thing in common - **Gyprock Aquachek™ 10mm**.

You'll have peace of mind when the wet areas of your home are lined with Gyprock Aquachek™, which is specially manufactured to resist moisture and humidity.

This makes it suitable for use in bathrooms, laundries, kitchens, toilets and protected external ceilings like soffits and verandahs.

Because Aquachek™ is not subject to moisture movement and has extremely low water absorption characteristics, it provides an excellent, stable substrate for ceramic tiles.

GYPROCK AQUACHEK™ 10MM

The core, face and back of Gyprock Aquachek™ are treated to make it resistant to moisture and humidity without compromising integrity.

In residential projects, it is ideal for use as a wall and ceiling lining in wet areas of the building.

THINGS ARE LOOKING UP!

Gyprock Supaceil™ with Optimised Core Technology is perfect for any ceiling style, whether flat, raked or coffered.

Head and shoulders above the rest, Gyprock Supaceil™ sets the standard for plasterboard in ceilings. This lightweight 10mm thick plasterboard features Optimised Core Technology to provide significantly improved strength, handling and board performance.

It is typically used as a superior ceiling lining option in residential applications and can be used to span up to 600mm joist centres.

It is most suitable for areas of the home where exposure to moisture is not a concern such as bedrooms, living areas and entranceways.

GYPROCK SUPACEIL™ 10MM

Gyprock Supaceil™ was the first product in Australia manufactured with **Optimised Core Technology** which provides greater breaking strength in a substantially lighter board.

This improved strength ensures it will stay flatter, even when installed on ceiling joists with 600mm centres.
